

CHAIN OIL

DANGER

MASTON CHAIN OIL effectively protects and lubricates chain and transmission gears. Suitable for example for industrial and agricultural wire cables, chains and conveyors. Thanks to its excellent penetrating power, also lubricates the innermost parts of a cable's core, where the greatest loading takes place. Stays on well, without dripping or splashing. Reliable even in cold conditions, with ambient temperatures of -30 °C – +140 °C. Used regularly, Maston Chain Oil helps to lengthen the useful life of the treated device. Instructions: Shake before use. Spray onto object to be treated. Leave to take effect for a moment before using the machine/device. Not suitable for O-Ring chain.

SIZE: 400ml
