2K Two® Epoxy Primers

Maston 2K Two® Epoxy Primers can be applied directly on all kind of surfaces. Their bonding properties are excellent and they create an absolutely water and air tight film. Unlike 1-components, they bond also on galvanized steel and aluminium. They provide an excellent corrosion protection and adhesion bridge layer for putties or top-coats, which can be applied directly on the primer with or without sanding.

2K Two® Epoxy Top Coats

Maston 2K Two® Epoxy Top Coats are extremely hard and durable. Application direct to metal with superior adhesion and corrosion resistance. They form a protective paint layer with excellent weather and chemical resistance combined with superior hardness. Highly flexible.

2K Two® PU Clear Coats

Maston 2K Two® PU Clear Coat forms a crystal clear, high solid, extremely durable coating and has a chip and UV-resistant film. It is easy to apply and immediately forms a deep and shiny surface without the risk of dripping. It can be applied on solvent-borne and water-borne basecoats.

2K Tinting Concept

Maston 2K Tinting Concept is a unique way to retrieve customized colors. It is the quickest and easiest way to tint and pack customized colors in 2K spray cans. The concept supports RAL and NCS color standards and many more customized colors. The tint bases are available in matt, semi-gloss and high gloss. The tint bases contain 2K binder, hardener, solvents, additives and propellant. For more information www.2kmix.com
